TURNING INSIGHT INTO IMPACT

Hi, I'm Rasri, a passionate and experienced UX/UI Designer who crafts intuitive and engaging digital platforms. **I specialize in blending functionality with creativity to design user-centric products that not only look beautiful but also solve real-world problems** to delivering designs that prioritize usability and user satisfaction.

APPLYING THE UXUI DESIGN SHOWCASE

RMS (MVP) DIGITAL MENU ORDERING

01 - OVERVIEW

Many restaurants still rely on manual ordering and fragmented systems, causing delays, order mistakes, and inefficient communication between customers, waiters, and the kitchen. This results in long wait times, poor customer experience, and operational inefficiencies.

Problem**

RMS or The Restaurant Management System (is an integrated platform that streamlines operations, enhances customer experience, and optimizes performance through POS, Digital menu ordering, inventory, staff scheduling, CRM, and analytics.

Product Vision: To create an all-in-one restaurant management platform that simplifies operations, reduces costs, improves customer satisfaction, and drives profitable growth through data-driven insights.

02 - PROBLEM STATEMENT

Problems

- Manual order taking and payment processing lead to errors and delays.
- Lack of interconnected systems results in fragmented operations.
- Inefficient inventory management leads to food waste and out-of-stock situations.
- Restaurants that rely on traditional ordering methods often experience long wait times.

Solutions

- Real-time inventory tracking and automated reordering.
- A POS system integrated with order management.
- Real-time and forecasting of stock levels.
- A digital menu system allows customers to scan a QR code, browse the menu, place orders, and pay from their smartphones, reducing wait times and improving restaurant efficiency.

03 - RESEARCH & INSIGHT

The target users of a Restaurant Management System (RMS) are the people who use the system to manage restaurant operations, process orders, and improve service efficiency.

1. Restaurant Owner / Manager

- Oversees the entire restaurant operation.

2. Waiter / Service Staff

- Takes customer orders and provides service.

3. Kitchen Staff / Chef

- Prepares food based on orders received.

4. Cashier

- Handles payment and billing.

5. Customers

- Order and pay for food.

“ One of the users who participated in confirming the testing various functions. ”

Nuth Chanpuang

Age: 41 yrs

Education: Bachelor Degree

Hometown: Bangkok, Thailand

Family: Single

Occupation: Business development

“I feel frustrated by a lack of support and stuck in the same routine.”

Goals

- Order food quickly without waiting for staff
- See clear menu information (price, photos, ingredients)
- Customize meals easily (add-ons, spice level, etc.)
- Pay conveniently via mobile payment

Frustrations

- Waiting too long for staff to take orders
- Paper menus that are unclear or outdated
- Difficulty splitting bills with friends
- Language barriers when traveling

Nut works at a financial company. She commutes to work by BTS Skytrain. After work, during her lunch break, she often goes to her favorite restaurant with friends, but she's frequently frustrated by the long queues, the slow ordering process, and the time wasted at the restaurant.

04 - USER JOURNEY/ USER FLOW

Journey phases	Arrive at Restaurant	Wait for Menu	Browse Paper Menu	Wait for Waiter to Order	Place Order Verbally	Wait for Order Processing	Receive Food	Request Bill
User actions	Enters restaurant and sits at a table	Waits for waiter to bring a paper menu	Reads menu items and prices	Waits for waiter to take order	Places order verbally	Waits for food to be prepared	Receives food	Requests bill
Thoughts	"I hope I can order quickly."	"Why is it taking so long?"	"Do they have pictures?"	"I'm ready to order"	"What's the total?"	"How long will it take?"	"Is this good?"	"Can I get the bill, please?"
Emotions	😊	😞	😊	😊	😊	😊	😊	😊
Pains	No staff nearby	Staff are busy with other tables	Limited images, unclear descriptions	Hard to hear waiter	Waiter is slow	Food is slow	Food is not good	Waiter is slow
Opportunities	Provide faster ordering methods	Self-service menu access	Use digital menu with visuals	Enable ordering via app	Enable ordering via app	Enable ordering via app	Enable ordering via app	Enable ordering via app

05 - IDEATION & TEST

📌 Wireframe & Prototype

- High-fidelity screens
- UI components
- Design system
- Color and typography

🔧 Testing Method

- Scenario-based usability testing
- Task completion measurement
- Feedback sessions with managers

📊 Results

- 35% faster order processing
- Reduced stock entry errors
- Improved visibility of daily revenue
- Positive feedback on dashboard clarity

4. Prioritization

06 - FINAL & OUTCOMES

Finding 01

Most users need to be clear about who orders each item.

Finding 02

Users need to know how many items are placed.

Finding 03

They thought it was important to add a price summary.

Before

After

Recommendation 01

Add a name and table number to identify the user.

Recommendation 02

Add the total number of items to be noticed

Recommendation 03

Added a total price, after 74% of the users need to know.

07 - IMPACT & REFLECTION

To ensure the quality and performance of the product after the development phase, we track the usage of various features using Google's tracking system. This includes identifying metrics to measure and analyze, such as gender, age, location, and the time users spend completing tasks.

PRODUCT EXPERIENCE CASE STUDIES

PROJECT NAME: Axonstech Solutions

The Agritech System transforms traditional farming into a **data-driven, efficient, and sustainable ecosystem**, enabling stakeholders to increase output while reducing waste and risk.

Problem Statement

- Users need easy and convenient purchasing channels.
- Limited payment options.

Solution

- Address a seamless purchasing channels
- Expanded & Flexible Payment Options

Impact

- Faster, more convenient checkout experience
- Higher sales conversion rate

PROJECT NAME: Digital menu ordering system

Problem Statement

- Order errors from manual input
- High dependency on staff availability
- Limited upselling opportunities

Solution

- Scan QR code to access menu
- Place orders directly from mobile device
- Send orders directly to kitchen POS system
- Complete payment digitally

Impact

- Higher efficiency
- Scalable operations
- Data-driven sales insights
- Improved customer satisfaction

PROJECT NAME: LHB YOU

The application provides seamless access to banking services including account management, fund transfers, bill payments, savings tools, and financial insights — all within a unified mobile experience

Problem Statement

- Inconvenient Access
- Fragmented Financial Management
- Limited Financial Visibility

Solution

- Anytime, Anywhere Access
- Unified Financial Dashboard
- Smart Financial Tools

Impact

- Increase digital adoption and reduce branch dependency
- Simplify everyday financial transactions

PROJECT NAME: Operational solutions provider

Enabling organizations to operate smarter, faster, and more efficiently through integrated, data-driven solutions.

Core Value

- Streamlining processes to reduce waste, time, and operational costs.
- Connecting tools, teams, and workflows into a seamless operational ecosystem.
- Providing real-time insights and analytics to improve accuracy and performance.

Responsibilities

- Conduct stakeholder interviews (operations managers, staff, admins)
- Structure complex dashboards and data flows
- Map user flows for operational tasks
- Create real-time monitoring interfaces

PROJECT NAME: Tops Supermarket

The Delivery Platform is a digital commerce solution that enables customers to browse, purchase, and receive groceries conveniently via mobile or web application.

Problem Statement

- Customers must travel to physical stores
- Customers can't check product availability before visiting.
- Disconnected systems between store and delivery

Solution

- Customers are spending less time shopping in physical stores
- Real-time inventory visibility
- Estimated delivery time

Outcome

The solution removes time and location barriers, making grocery shopping more convenient and scalable while increasing customer reach and revenue.
